

30-meter communication tower

Overview

A monopole tower of 30 meters is considered a medium-sized tower and is suitable for various applications, including cellular communication, wireless broadband, and radio broadcasting. The 30-meter height allows for improved signal coverage and transmission range in the surrounding. A 30m monopole tower is a self-supporting tower that can also be classified as a vertical structure. Its primary composition includes steel, and it is approximately thirty meters, or 98 feet, tall. Unlike lattice towers or guyed masts, monopole towers stand on their own without the need for. The arrangement of equilateral triangle form and fixation of guyed strand, greatly reduce the weight of the tower; small wind load factor, simple foundation forms, small footprint (typically 0. A monopole tower that is 30 meters in height refers to a specific type of tower structure that consists of a single vertical pole or column and has a height of 30 meters (98. Understanding the underlying market drivers is crucial for strategic procurement.
