

Case Study of Fiber Bragg Grating Force Measurement Application

Overview

A team from the University of Vermont has used Fiber Grating sensors to remotely monitor the Waterbury Bridge in Vermont, transmit measured data to a central computer for analysis and publish on the Internet. Additionally, FBG is highly sensitive to strain and temperature, which is why it has been used in FBG force sensor systems for. Abstract: As a sensor with excellent performance, many kinds of sensors, such as uniform fiber Bragg grating and chirped fiber Bragg grating, have more applications. Through the principle of fiber Bragg grating internal writing, interference side writing, phase template writing and other. The key to evaluating the health status of cable-stayed bridges lies in the accuracy of cable force measurement. When measuring the cable force using the conventional frequency method, the clearance between the bracing cable and the protective tube is typically disregarded.
