

Does an OTN network need a router

Overview

No, an ONT is not a router. An ONT converts optical signals into electrical signals, but it does not perform the routing functions that direct traffic between devices on a network. What Is a Router?

A router. As of December 2009, OTN has standardized the following line rates. Transports an OC-768 or STM-256 signal or a 40 Gigabit. This guide explains how an ONT connects your fiber and a router builds your network for better IT decisions. If you're managing a fiber-optic internet connection for your business, you'll work with two essential pieces of equipment: an Optical Network Terminal (ONT) and a router. Key elements of OTN include: Standardized framing (the “digital wrapper”): OTN adds overhead. Does one still need a modem or router in conjunction with an ONT?

With the help of this article, you will be able to answer these questions logically and learn how ONTs operate alongside fiber-optic internet systems.
