

Fiber Optic Cable Warning Post for Fall Prevention

Overview

Buried detectable & non-detectable warning tapes, high visibility reflective laminated labels & flexible line marker posts, soil markers, domed posts. Clearly identify vulnerable underground assets with durable ground-level markers. Fiber optic cables are network cables that hold strands of glass fibers and are intended for telecommunications and long-distance networking. They transmit information using light-based (optical) technology. Although these fibers don't contain electricity, they may still be a hazard as the glass. Our Warning Fiber Optic Cable Triangular Marker identifies the presence of sensitive fiber optic cables beneath the surface. All sales on stock and custom utility markers are final - no returns accepted. • Find both in-stock. Besides the usual safety issues for all construction, generally covered under OSHA rules in the US (OSHA 10 and 30), fiber optics adds concerns for eye safety, chemicals, sparks from fusion splicing, disposal of fiber shards and more, covered in Part 1.
