

Fiber optic router latency is unstable

Overview

The fix: enable SQM (fq_codel or CAKE) on your router, set your up/down shaper just below your real line rates, and test again. This keeps latency and jitter flat even under load. Switching to a fast, reputable DNS resolver can cut down on failed lookups and random “hangs” before. Fiber optic networks are celebrated for their speed and reliability, but even the best systems can encounter problems. When issues like signal loss, slow speeds, or intermittent connectivity arise, systematic troubleshooting is key. What can I do to troubleshoot here and what should I check?

: r/HomeNetworking Just got Fiber installed, and down speed is phenomenal but I seem to be getting. Latency refers to the time it takes for data to travel from your device to its destination and back. Gamers feel every millisecond of delay; video conferencing teams struggle when jittery lag ruins every session; business application users watch productivity tank as they wait for slow responses. This comprehensive guide addresses these exact issues drawn from real user experiences. If you're trying to pin down the causes of unstable internet connection, the tricky part is that instability can come from many small issues stacking together: Wi-Fi quirks, home network congestion, ISP hiccups, even how your router's software handles traffic.

How to Improve Network Latency When Speed Isn't the Problem

Network latency isn't always about bandwidth. Identify bottlenecks, optimize infrastructure, implement QoS, and monitor to reduce latency where it matters.

Just got Fiber installed, and down speed is phenomenal but I ...

The solution is either to turn on QoS on your current router, or switch to a router that does QoS. Ideally you want a router that will do fq_codel, and that can handle gig throughout even with QoS turned on.
