

Fire Distribution Box Trip Unit Terminal Model

Overview

The Fire Terminal (Model FT2050) consists of the Fire Terminal Board (Model FTI2001-U1), the Operating Unit (Model FCM2018-U2 or Model FCM2019-U2), and a one-height-unit enclosure. Safely conduct, connect and distribute energy in hazardous areas with R. With a wide range of enclosure materials, sizes, ambient temperature ranges, and customizable configurations, these solutions can. Unlike fixed-trip miniature circuit breakers, MCCBs equipped with adjustable trip units offer engineers the flexibility to tailor protection characteristics to specific applications, optimize coordination between protective devices, and prevent unnecessary downtime from nuisance tripping. Several operator terminals are possible for each fire-detection system [up to 16 nodes, max.] The Fire Terminal and equipment connects to SafeDLINK network that can be configured for system-global view or specific-panel local view. This configuration allows the operator for system control to. Gamewell-FCI coded fire alarm boxes and industrial transmitters provide large industries, institutions and communities with the surest and safest means of prompt, effective fire alarm reporting. com All the FireBoxes have passed.
