

Fire resistance rating of optical fiber cable

Overview

In the National Electrical Code (NEC), fiber optic cables are categorized into various fire ratings, including OFNP/OFCP, OFNR/OFCR, OFNG/OFCG, and OFN/OFC. OFNP/OFCP is the highest flame-retardant rating in the NEC standards, meaning it is plenum-grade. These requirements specify how the fiber cables will perform under fire conditions. These requirements concentrate on how the fiber cables will add a dangerous amount of fuel and transmit fire from one place to. Below are the most commonly used fiber optic cable jacket materials and their key characteristics: Excellent moisture, abrasion, and corrosion resistance; good electrical and chemical stability; HDPE is harder and heat-resistant; LDPE is more flexible. If a fan forces airflow onto a bundle of. onal during fire. The cable has a design that ensures operation for more than 3 hours in fi es up to 1000 °C.
