

Fireproof sealing of pipe trays

Overview

Service penetration seals are passive fire protection systems designed to maintain the fire resistance of building element or section - wall or floor - where services such as cables, cable trays, pipes or ventilation ducts pass through them. The fire-resistant penetration sealing system secures an efficient fire barrier. It is tested and approved by certifying authorities all over the world to ensure passive fire. Pyroplex Pressure Exerting Sealant expands multi-directionally when exposed to elevated temperatures, exerting pressure to seal and prevent the passage of fire and smoke through service penetrations. The sealant is designed for use around cable tray and bunched cable applications. Pyroplex Pressure. Firebreather® Cavity Barriers, Eaves Vents, and Air Transfer Grilles ensure necessary ventilation while instantly stopping flames and embers. You can easily calculate the material quantities and the resulting costs for the implementation of our fire protection sealing systems. We offer a comprehensive selection of products that have been specifically. AF PANEL is a fireproof panel certified under EN 1366-1, EN 1366-3 and EN 1366-4 up to EI 240 protection of a wide range of wall and floor penetrations.
