

How many years does a pigtail jumper cable last

Overview

However, a more practical lifespan often falls in the range of five to seven years before environmental factors or physical damage compromise their function. Jumper cables are considered an essential piece of emergency road equipment. Can jumper cables go bad?

There's nothing in the battery cables that will necessarily go bad, but there. A well-made set of cables, when stored correctly, can technically last for many years, sometimes exceeding a decade, since the conductive materials themselves do not inherently expire. Look for corroded contacts as a sign that it's time to replace them before the next use! If you think you need a new set of jumper cables; check out this article over here. It may all depend on the materials and quality of the product, but it's not uncommon for jumper cables to last more than a decade if they are correctly. My jumper cables are several years old, but I store them in my car in case I need a battery jump.
