

How to adjust the time on a relay protector

Overview

You can tweak C1 and R3 to match your desired pulse length (currently 3. Simply multiply them to get the time in seconds. There is some more or less complex math behind this, look for RC timing circuit on google to find massive tutorials and resources for learning. PSM Curve: Shows the relationship between relay operating time and PSM, illustrating how relay time varies with fault current levels. When studying electrical protective. Overcurrent protection relay settings are critical for any electrical distribution system. Co-ordination procedure Correct overcurrent relay application requires knowledge of the fault current that can flow in each part of the. Is it possible to achieve this using some simple passive components or a transistor or darlington from the ULQ2003 driver?

Edit: I have improved the image and included the pulse-time in it. In my earlier question it was a 9V relay.
