

How to check the load of the core switch

Overview

To determine switch CPU utilization, enter the `show processes cpu sorted privileged EXEC` command. The output shows how busy the CPU has been in the past 5 seconds, the past 1 minute, and the past 5 minutes. It is essential for several reasons:

Performance Monitoring: High CPU utilization can lead to slower performance, increased latency, and even service disruptions. The core switch is usually your most powerful switch and depending on the design its the one with routing on it and connected to your firewall, there is no command which will tell you what the core switch is, it will be based on the topology and design of the network, are the switches all layer. The core switch is managed, and I have logged in to look at the most used ports to try and take some of the guess work out of which are uplinks to other cabinets. I can see that port 1 is the uplink to the WAN. performance of that L3 switch?

01-14-2021 02:43 AM - That would depend on the particular model/type,can you. Master quick and accurate CPU utilization checks on Cisco switches with detailed commands, troubleshooting advice, and alternative approaches for maintaining network health.
