

Huawei fiber optic router has no network

Overview

If the router's indicator is steady red, it is not connected to the Internet. In this case, perform the following to troubleshoot: Check the WAN port connection. On the Home page, check whether the " No Internet cable detected " message is. They can connect to the Wi-Fi as usual and even access the router GUI wirelessly. I bought a new TP-Link AEX-7500 router from HK, I am trying to replace TP-Link AEX-7500 with Huawei LG8245x6 and connect the TP-Link. There are multiple reasons why your device cannot find the Wi-Fi network of your router: Your router's Wi-Fi may have been disabled, your router's Wi-Fi settings may have been synced with the uplink Wi-Fi network, your router's Wi-Fi name may be hidden, or your device may be in a place not covered. After Huawei router is set up according to the instructions, it is found that the equipment cannot access the Internet. We will introduce it to you in two cases: one is that individual equipment cannot access the network, and the other is that all equipment cannot access the network.
