

Installation of Lighting Distribution Box for Pipe Shaft

Overview

Construction procedure: Construction preparation → Prefabrication and processing of pipe bending → Determination of box position → Fixing of box and box → Pipe connection → Expansion joint treatment → Grounding treatment

Construction procedure: Construction preparation → Prefabrication and processing of pipe bending → Determination of box position → Fixing of box and box → Pipe connection → Expansion joint treatment → Grounding treatment

ANNO Facade Lighting Engineering project implementation process is scientific and standardized: from construction preparation, pipeline laying to lamp installation, distribution box configuration and other basic operations, followed by lightning protection and grounding construction, system. Through-wiring within the luminaire is not possible for certain luminaires or connecting pillars. In this case, we recommend BEGA distribution boxes for installation in soil. After connecting the electrical lines to the terminals, the distribution box must be filled with the sealing compound. The manufacturer is requested to make samples and re-production after passing the acceptance; and when the product enters the site, the inspection and acceptance are strictly in accordance with the design and specification standards.

2: Lighting. First of all, you need to have a simple understanding of the definition of a distribution box, and make it clear which kind of distribution box you want to install. Strictly speaking, the word “Distribution Box (D-box)” can refer to two categories:.

Applications - The minimally invasive retrofit kit enables the opportunity existing remote power infrastructure cross arm, & wiring) providing the total cost of ownership.
