

Is the cable tray galvanized or non-galvanized

Overview

Common cable trays are made of galvanized steel, stainless steel, aluminum, or glass-fiber reinforced plastic. The material for a given application is chosen based on where it will be used. , ABB offers steel cable tray with pre-galvanized and hot-dip galvanized. Galvanization is an economical and effective way to protect steel against corrosion. Galvanized steel naturally oxidizes when exposed to air, but at a much slower rate than steel. Zinc provides sacrificial protection, which means that it corrodes while. Each cable tray type performs a different function and comes in various materials such as aluminum, galvanized steel, and FRP. What is Cable Tray?

A cable tray is a unit, or set of units, with their fittings forming a rigid structure to support cables and assist in channeling them. By the end of this article, you'll understand which type of tray aligns with your facility's.
