

Messy cables in the distribution box

Overview

Poor cable routing blocks airflow, messy cables create safety hazards, and it all creates a serious fire risk. A significant risk associated with poor cable management is overheating, and therefore a major. In many businesses, network cabling hides behind walls, under desks, or inside server rooms. But when those cables are tangled, unlabeled, or poorly managed, they can cause big problems for your technology and your bottom line. If a network component breaks, it must be replaced as quickly as possible as. That's where the benefits of structured cabling come into play: boosted network speed, reduced downtime, and much smoother scaling when your business grows or changes. There's a common assumption that only big companies with data centres need to worry about cable organisation. In a business cabling setup, it can make cables harder to trace, equipment harder to reach, and future changes harder to plan.
