

Network Distribution Box Standards

Overview

The international range of validity is set down in IEC 61801 and in the national German standard of DIN EN 50173. The standard series of EN 50173 is divided into five areas for various applications and covers application-neutral communication cabling for information technology. For procurement professionals, electrical contractors, and project managers, choosing the right Distribution Box (DB Box) is a critical decision that directly impacts system safety, reliability, and long-term operating costs. You must make safety your top priority when working with low voltage distribution boxes. It is a vital part and central hub of any electrical system. Whether it's a home, office, or factory. Recommendation ITU-T L. It details the FDB housing, FDB fibre management system, cable attachment and termination system, and specifies the mechanical and environmental characteristics.
