

Outdoor Laying Method of Dish-Type Optical Cable

Overview

FOA provides downloadable standards such as NECA/FOA-301 for detailed installation practices. You can access extensive online resources and training through the FOA website and Fiber U platform. There are three common laying methods for outdoor optical cables, namely: underground pipeline laying (that is, laying optical cables in underground pipelines), direct underground laying and overhead laying (that is, laying from utility poles to utility poles in the air. Depending on engineering. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. Turn-backs and all sharp changes of direction. The objective of this document is to be an optical fibre cable installation and laying guide, addressed to new installers, also being useful as a reminder to experienced installers. Deploying fiber above ground on poles or towers removes the need for underground digging and is particularly useful when the ground is uneven, rocky or both. Compared with indoor fiber optic cables, outdoor.
