

Precautions for installing cable tray expansion joints

Overview

The cable tray needs to be anchored at the support closest to the midpoint between the expansion joints with hold down clamps and secured by expansion guides at all other support locations. The expansion guides allow the cable tray to slide back and forth as it. 1993 NEC Section 300-7 (b) states that "Raceways shall be provided with expansion joints where necessary to compensate for the thermal expansion or contraction. As cables and trays expand or contract, they can cause stress on the structure, leading to potential damage or misalignment. To mitigate these risks. The correct installation of cable trays is crucial for establishing a reliable and efficient cable system. 305(a)(3), or comparable standards promulgated by States operating OSHA-approved State plans. In addition, this document contains several references to provisions of the National Electric Code.
