

Regular routers have fiber optic cables

Overview

The answer is actually no—fiber optic equipment differs significantly from cable setups. A fiber router is designed to work specifically with fiber optic internet connections, providing faster and more reliable speeds compared to a normal router that typically works with traditional broadband connections. Fiber routers are able to handle higher bandwidth demands and offer lower. To connect your fiber optic cable to a router, ensure you have the following: Fiber optic modem (ONT): Most fiber connections require an Optical Network Terminal (ONT), provided by your ISP. It acts as the central hub for distributing the high-speed internet that comes into your building via light signals traveling through fiber-optic cables. Its main function is to translate. We provide bulk fiber patch cords, ONTs, and pre-terminated cables for large-scale FTTH deployments.
