

Silicon Core Fiber Optic Sensing

Overview

Particular focus is placed on their potential use in various applications, such as optical modulators, wavelength conversion, amplification, in-fiber junctions and diodes, photovoltaic fibers, and sensors/wearable structures. Silicon-core optical fibres represent a convergence of semiconductor photonics and conventional fibre technology, embedding a crystalline silicon or silicon-germanium alloy core within a glass cladding. This architecture combines the high refractive index contrast and pronounced nonlinear response. The study of the FSBS effect in silicon-core fibers facilitates further theoretical exploitation of the potential of FSBS in fiber-optic sensing. Although conventional silica glass fibres are routinely used in. Second, we designed and simulated a silicon core-based fiber Bragg grating and applied it for simultaneous sensing of temperature and environmental refractive index. The sensitivities for the temperature and refractive index were 80. ©2023 The Author(s) Since their first.

Article Content

Investigation of Silicon Core-Based Fiber Bragg Grating

In this article, we theoretically designed and simulated a silicon core fiber for the simultaneous detection of temperature and refractive index. We first

Turning Fiber into a Sensing System: The Magic of Fiber

Imagine a world where the Internet doesn't just connect but senses—detecting earthquakes, monitoring battery health, or safeguarding

A Silicon-tipped Fiber-optic Sensing Platform with High

Michigan State University. This work reports an innovative silicon-tipped fiber-optic sensing platform (Si-FOSP) for high-resolution and fast

High-Sensitivity Compact Fiber-Optic Coherent Micro-Vibration

A high performance and miniaturized micro-vibration sensing system is highly desirable for satellite payload platforms. In this paper, a compact micro-vibration sensing system assisted with silicon

Plastic optical fiber

Plastic optical fiber (POF) or polymer optical fiber is an optical fiber that is made out of polymer. Similar to glass optical fiber, POF transmits light (for illumination or

Silicon Core Fibres for Nonlinear Photonics: Applications and

In this paper I review our efforts regarding the de-sign and optimization of SCFs for use in all-fibre nonlinear optical applications.

Optical Fiber Sensors: Working Principle, Applications,

1 Introduction An optical fiber is a flexible, transparent, and cylindrical waveguide made of plastic or silica, with diameters slightly thicker than that of a

Silicon Core Fibers for Nonlinear Photonics ...

This paper reviews the recent advances in the development and application of SCFs for nonlinear optical processing and source generation.

Hollow core photonic crystal fibers

Explore NKT Photonics' hollow-core photonic crystal fibers for ultrashort pulses, sensing, and imaging with ultra-low bend loss.

Suspended-core Fibers for Sensing Applications

Abstract: A brief review on suspended-core fibers for sensing applications is presented. A historical overview over the previous ten years about this special designed microstructure optical fiber is

NuSENSOR 1310/1550 nm Pure Silica Core Single-Mode Fiber

Coherent NuSENSOR pure silica core single-mode fibers are immune to the damaging effects of hydrogen ingress, enabling Brillouin, Rayleigh and FBG based distributed temperature and strain

An active core fiber optic sensor for detecting trace H

Abstract An active core fiber optic sensor has been developed for detecting trace H₂S in high-temperature gas samples. This sensor uses a cadmium oxide doped porous silica optical

Silicon Core Fibers for Nonlinear Photonics: Applications and

Over the past two decades silicon core fibers (SCFs) have emerged as a promising platform for use in nonlinear photonic applications. By harnessing the unique optical properties of the crystalline silicon

Nature Index Silicon-Core Optical Fiber Technologies

This architecture combines the high refractive index contrast and pronounced nonlinear response of silicon with the flexibility, low loss guidance and established infrastructure of optical...

Silicon Core Fibers for Nonlinear Photonics: Progress and Trends

1. Introduction Over the past two decades, silicon core fibers (SCFs) have undergone significant advancements in their fabrication and optimization such that they are now established platforms for

Semiconductor core fibres: materials science in a bottle

Novel core fibers have a wide range of applications in optics, as sources, detectors and nonlinear response media. Optoelectronic, and even electronic device applications are now possible,

MarketsandMarkets

Revenue Impact Firm - MarketsandMarkets offers market research reports and quantified B2B research on 30000 high growth emerging opportunities to over 10000 clients worldwide. Get detailed insights

Silicon core fibers—From fabrication to applications

This tutorial reviews silicon core fibers: a platform that unites fiber optics and silicon photonics.

Silica Optical Fibers Connected via a Micro MIP-Core

Molecularly imprinted polymers (MIPs) can be combined with optical fibers (OFs) to create various sensor configurations, yielding low-cost and highly

Simultaneous measurement of temperature and refractive index

This paper proposed a fiber sensor based on a Silicon core fiber incorporated with a fused silica grating design. The proposed structure has a high sensitivity in refractive index and temperature variation

(PDF) High-resolution and fast-response fiber-optic

We report a fiber-optic sensor based on a silicon Fabry-Pérot cavity, fabricated by attaching a silicon pillar on the tip of a single-mode fiber, for high

High sensitivity sol-gel silica coated optical fiber sensor

Abstract and Figures A high sensitivity ammonia sensor based on a tapered small core singlemode fiber (SCSMF) structure for measurement of

A High Temperature Sensor Based on Silicon Core Optical Fiber

The accurate measurement of temperature at high temperatures has been a challenge for temperature sensors. For solving this problem, a high temperature sensor based on silicon core optical fiber

Air-silica core microstructured optical fiber-based SPR sensor for ...

We propose an air-silica core microstructured optical fiber-based surface plasmon resonance (SPR) sensor to simultaneously measure temperature and refractive index (RI).

Beyond Silica: Novel Uses for Hollow-Core Fibers

Feature OPEN Beyond Silica: Novel Uses for Hollow-Core Fibers Jeff Hecht In addition to beating conventional telecom fiber on loss and latency,

S1310-CMTA, Pure Silica Core Select Cutoff SM, Optical Fiber

Datasheet Components & Accessories S1310-CMTA, Pure Silica Core Select Cutoff SM, Optical Fiber Coherent NuSENSOR pure silica core single-mode fibers are immune to the damaging effects of

Silicon core fibres: extending the reach of nonlinear fibre systems

This project aims to address these key limitations to extend the application of nonlinear fibre systems by using a new class of fibre where the silica core has been replaced by a crystalline silicon material.

Forward-stimulated Brillouin scattering in silicon-core fibers

As a new type of semiconductor fiber, silicon-core fibers have a higher non-linear effect compared with silica fibers. Forward-stimulated Brillouin scattering as a typical optical non-linear

Fiber Optics

Fiber Optics Uncover the latest and most impactful research in Fiber Optics. Explore pioneering discoveries, insightful ideas and new methods from leading researchers in the field.
