

The device connected to the router via a switch cannot recognize the IP address

Overview

Here are some solutions to resolve the issue of a switch not finding an IP address: Check the Router's DHCP Server: Verify that the router's DHCP server is enabled and responding to requests. Restart the Router and Switch: Restarting the router and switch can often resolve the issue. DHCP working via switch, because there is IP address associated with BVI1 (for native vlan), so you are connecting AP to the switch for fa0/1 or fa0/13?

Right?

Unfortunately. I have a basic setup with a R7406 gateway, ES205GP switch, and a single EAP670 AP powered through the switch. But fear not; there are multiple ways to troubleshoot and. Is there a way I can find the list of IP addresses connected to a switch (may be Unix command), so that I can visit each desk, run a command, and check all the active IP addresses (computers) connected to that switch, and based on that I can find out to which switch that specific IP address is. I have an OpenWrt router with IP 192. I can see traffic under Status > Real Time Graphs > Traffic > LAN5. However, when I add the switch (a Ubiquiti USW Flex Mini) my desktop does.
