

The switch s optical port must be connected to an optical module

Overview

One of the common issues seen when dealing with SFP troubleshooting is when the SFP module is simply not detected by the switch. The first check is to confirm physical connections. Check that the module sits correctly in the port and that the fiber cables are connected . Description: Huawei switches must use Huawei-certified optical modules. Huawei is not responsible for any problem caused by the use of non-Huawei-certified optical modules and will not fix. If optical attenuation is normal but the link still fails, check the switch port settings:

- Some switches use combo SFP/RJ45 ports, which require manual optical port configuration.
- Some ports are multi-rate multiplexed (e. Once the transceiver and fiber optic cable are plugged in properly in the switch optical module, you should be able to view the.

Problem: All optical ports cannot be connected, and the indicator lights are not on. The working rate, duplex mode, and. SFP or SFP+ optical transceiver failure can happen in multiple recognizable ways.
