Warranty Guaranteed Polarization Fiber Optic G 652D

Overview

652D Optical Fiber is ideally designed for use in metropolitan, local and access networks due to its superior specifications-low optical loss across the entire wavelength range from 1260 to 1625nm, tightest available geometry, low splice loss and low polarization mode dispersion. G. 05 dB at 1310 nm and 155 thout tolerances are reference values. Specifications are for product as supplied by Prysmian: any modification or alteration afterward of product may give different result. The information contained within this document must not be copied, reprinted or reproduced. There are 19 different single mode optical fiber specifications defined by the ITU-T, among which G. 652 fiber is the most commonly used. So this fiber. For network planners, project managers, and procurement specialists, understanding the G. 652D fiber price factors, and selecting reputable optic fiber manufacturers is key to project success.
