

What major is good for fiber optic communication

Overview

To be a fiber optic design engineer, you need a bachelor's degree in electrical engineering or another related field like telecommunications. Depending on the company you wish to work for, you may need more experience or a master's degree. Complete the appropriate certifications. Forbes Magazine's comprehensive analysis in April 2018 highlighted fiber optics as representing the cleanest and fastest wide-area networking solution currently available, emphasizing its unparalleled capacity for handling massive data volumes with minimal latency and exceptional reliability. If we look closer, you can see how those cables connect to more. Fiber-optic communication is a form of optical communication for transmitting information from one place to another by sending pulses of infrared or visible light through an optical fiber. This article provides the basic principles needed to work with this technology.
